AM312 PIR

DETECT | RASPBERRY PI | MOTION | MINI PIR

What does it do?

An **AM312** is a tiny PIR sensor that notices warm bodies moving nearby.

PIR means passive infrared. Its faceted lens divides the view into zones, so a person or animal moving between them makes the output switch on.

The complete AM312 module runs from 3V3 and uses very little power. Its sensitivity and roughly two-second output pulse are fixed.

Uses

Wardrobe light

DETECT Movement in the wardrobe → **DECIDE** Is someone reaching in? → **DO** Turn on the light

Dragon treasure alarm

DETECT Movement near the hoard → **DECIDE** Is someone sneaking closer? → **DO** Make the dragon roar

Lens	VCC	OUT	GND
Splits the view into zones	Power from 3V3	High on movement	Ground

Raspberry Pi Foundation

Code

Raspberry Pi

```
from gpiozero import MotionSensor

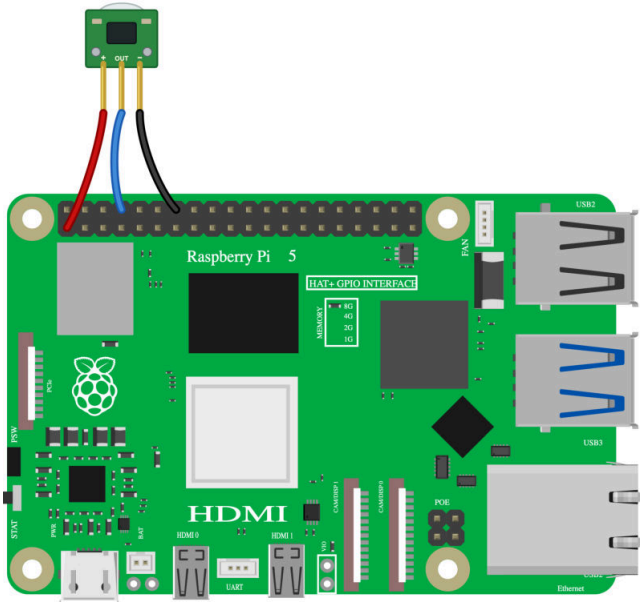

pir = MotionSensor(14)

moved = pir.motion_detected
```

`moved` is True or False. Use `pir.when_motion` and `pir.when_no_motion` to run functions when it changes. The AM312 has no sensitivity or delay dials; OUT normally stays high for about two seconds after movement.

Wiring

RASPBERRY PI 5

VCC → 3V3 (pin 1); **OUT** → GPIO14 (pin 8); **GND** → GND (pin 14).
