Button

DETECT | PICO BLOCKS | INPUT

What does it do?

A button lets someone tell your program to do something the moment they press.

Inside are two metal contacts. Pressing pushes them together so electricity can flow, and letting go springs them apart again.

Your projects can use it to start something, stop something, or count how many times it has been pressed.

Uses

Pedestrian crossing

DETECT Button and traffic phase → **DECIDE** Is it safe to cross? → **DO** Change the lights

Do not press this

DETECT Button is pressed → **DECIDE** Is the trap armed? → **DO** Play a silly sound

Cap
Press here

Legs
Four, joined in pairs

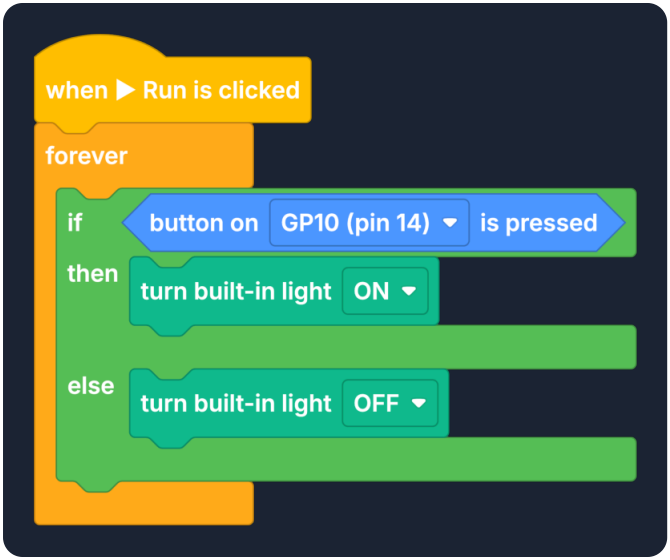

Gap
Straddle the channel

Raspberry Pi Foundation

Blocks

MicroLab

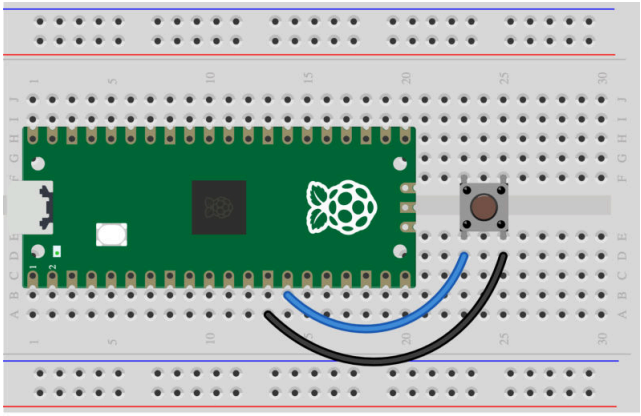

getmicrolab.com

The Pico's own light stays on while you hold the button down.

Wiring

PICO

GP10 (pin 14) → button → **GND** (pin 13)
