Capacitive touch

DETECT | PICO BLOCKS | INPUT

What does it do?

A capacitive touch sensor notices when a finger comes close to its metal pad.

It detects the tiny change in electric charge caused by your body, so no moving parts are needed.

Use it anywhere a project needs a hidden, wipe-clean or feather-light button.

Uses

Touch lamp

DETECT: Finger touches the pad → DECIDE: Is the lamp already on? → DO: Toggle the light

Banana piano

DETECT: A banana is touched → DECIDE: Which note should play? → DO: Play the note
