LDR

DETECT | PICO BLOCKS | LIGHT

What does it do?

An LDR is a sensor that measures how bright or dark it is.

LDR stands for light-dependent resistor. Light shining on it lets electricity through more easily, so your code can tell light from dark.

Your projects can use it to react when a lamp comes on, when night falls, or when a shadow passes over.

Uses

Street light

DETECT How dark it is → **DECIDE** Is it darker than dusk? → **DO** Switch the lamp on

Biscuit tin alarm

DETECT Light inside the tin → **DECIDE** Is the lid open? → **DO** Sound the alarm

Window Light lands here

Track Zigzag sensor

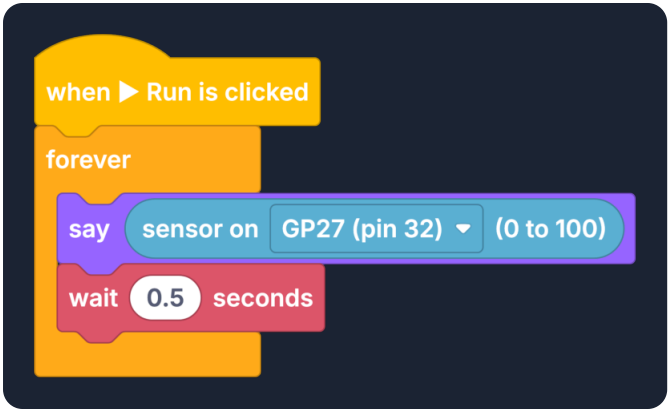

Legs Either way round

Raspberry Pi Foundation

Blocks

MicroLab

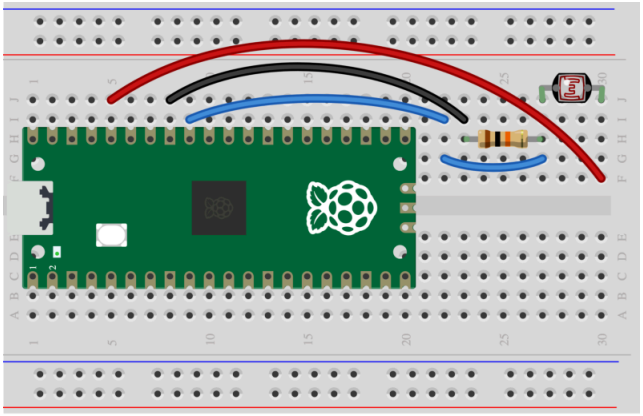

getmicrolab.com

The number goes up in bright light and down in the dark, from 0 to 100. Watch it in the terminal.

Wiring

PICO

3V3 (pin 36) → LDR → **GP27** (pin 32) → 10 kΩ → **GND** (pin 33)
