RGB LED

DO | PICO BLOCKS | OUTPUT | LIGHT

What does it do?

An RGB LED puts red, green and blue lights inside one clear package.

Varying the brightness of the three colours mixes millions of possible colours.

A common-cathode LED has one shared negative leg and needs one resistor for each colour.

Uses

Wi-Fi router status

DETECT Read connection status → **DECIDE** Which status colour is needed? → **DO** Mix the LED colour

Mood crystal

DETECT Read the mood dial → **DECIDE** What is the crystal's mood? → **DO** Glow that colour

Clear lens
Contains three LEDs

Long leg
Common cathode

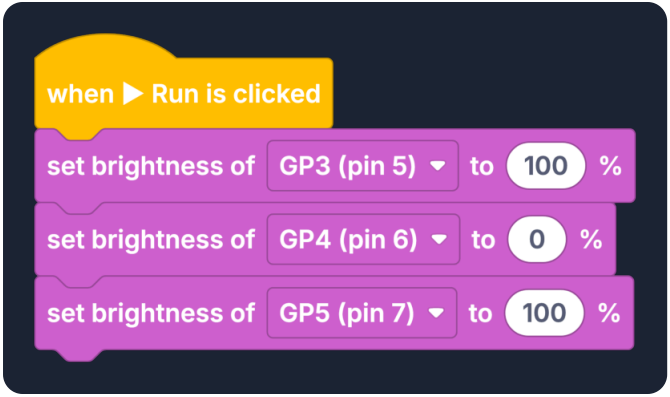

R, G and B legs
One 220 ohm resistor each

Raspberry Pi Foundation

Blocks

MicroLab
