Tilt switch

DETECT | PICO BLOCKS | INPUT

What does it do?

A tilt switch changes state when it tips past a particular angle.

While it stands upright, a tiny metal ball rests on two contacts and completes the circuit. Tip it over and the ball rolls away, breaking the circuit.

It can detect that an object has been picked up, tipped over or opened.

Uses

Iron safety shut-off

DETECT Iron tips sideways → **DECIDE** Has the delay elapsed? → **DO** Switch the heater off

Grumpy pencil case

DETECT Case is tipped → **DECIDE** Has it stayed tipped? → **DO** Make a grumpy noise

Metal can
Contains the rolling ball

Legs
No polarity

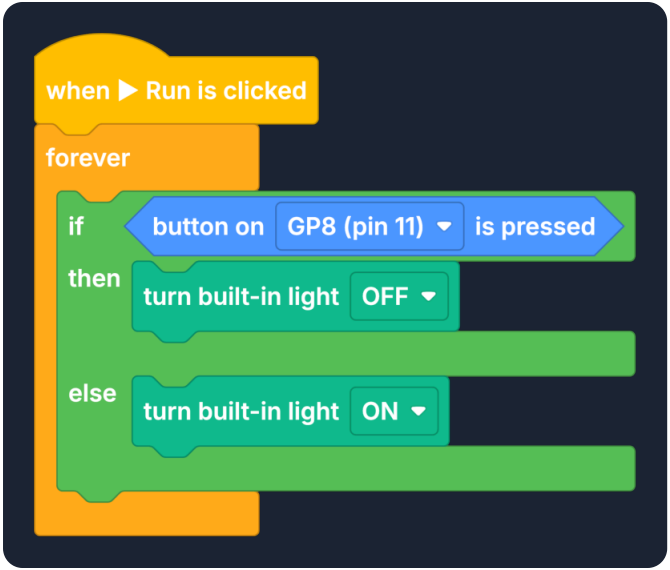

Angle
Changes the contact
