

Speaker

DO

OUTPUT

SOUND

What does it do?

A small passive speaker turns a changing electrical signal into sound.

Current through its coil moves a cone backwards and forwards, pushing the air.

The 220 ohm resistor shown here protects the GPIO; it also keeps this simple circuit fairly quiet.

Uses

Door chime

DETECT
Door button is pressed

DECIDE
Which chime to use

DO
Play the notes

Tiny fanfare machine

DETECT
Something mildly impressive happens

DECIDE
It deserves a fanfare

DO
Play triumphant notes

Cone
Pushes the air

Coil and magnet
Create movement

Terminals
Connect through 220 ohms

Code

● Raspberry Pi

```
from gpiozero import TonalBuzzer  
speaker = TonalBuzzer(17)  
speaker.play("E4")
```

● Raspberry Pi Pico

```
from picozero import Speaker  
speaker = Speaker(16)  
speaker.play("E4", duration=1)
```

For a louder speaker, use a transistor or amplifier rather than removing the protective resistor.

Wiring

RASPBERRY PI 5

GPIO17 → 220 ohms → speaker → **GND**

PICO

GP16 → 220 ohms → speaker → **GND**
