Speaker

DO | PICO BLOCKS | OUTPUT | SOUND

What does it do?

A small passive speaker turns a changing electrical signal into sound.

Current through its coil moves a cone backwards and forwards, pushing the air.

The 220 ohm resistor shown here protects the GPIO; it also keeps this simple circuit fairly quiet.

Uses

Door chime

DETECT Button and chime setting → **DECIDE** Which chime should play? → **DO** Play the notes

Tiny fanfare machine

DETECT Count achievement-button presses → **DECIDE** Has the target been reached? → **DO** Play triumphant notes

Cone
Pushes the air

Coil and magnet
Create movement

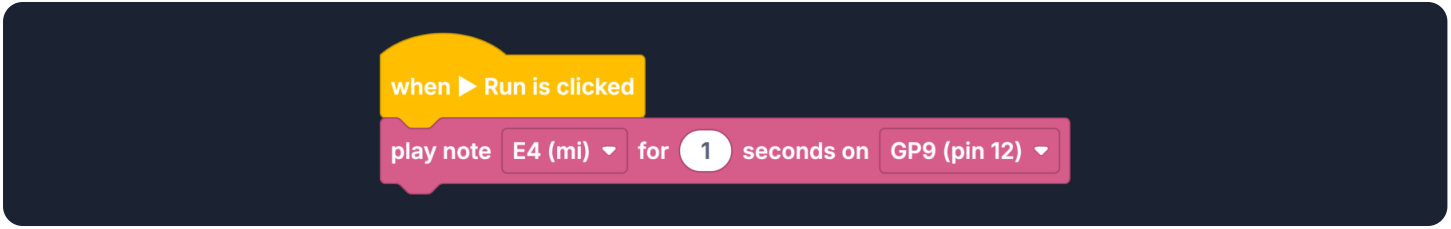

Terminals
Connect through 220 ohms

Raspberry Pi Foundation

Blocks

MicroLab

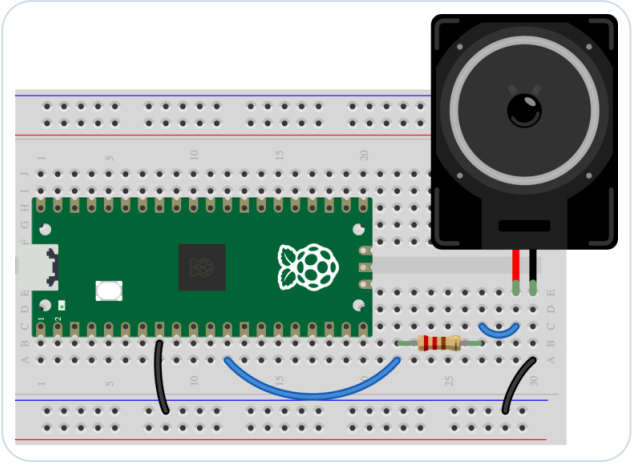

getmicrolab.com

Pick another note from the menu, or change how long it plays.

Wiring

PICO

GP9 (pin 12) → 220 ohms → speaker red (+) lead; black lead → **GND** (pin 8) via the − rail
